CAPS	9	17	34	51	68	85

WedgeStone & Tumbled WedgeStone Capstone

16 lbs per stone, 1.7 units per linear foot for Solid Wall Construction

plan & design

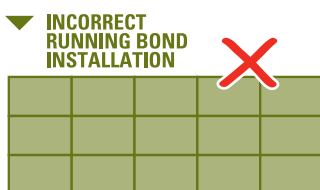

Install your garden wall in a few simple steps. Determine the square feet of your project area, then calculate the number of units by referring to the charts on the reverse side of this installation sheet.

installation

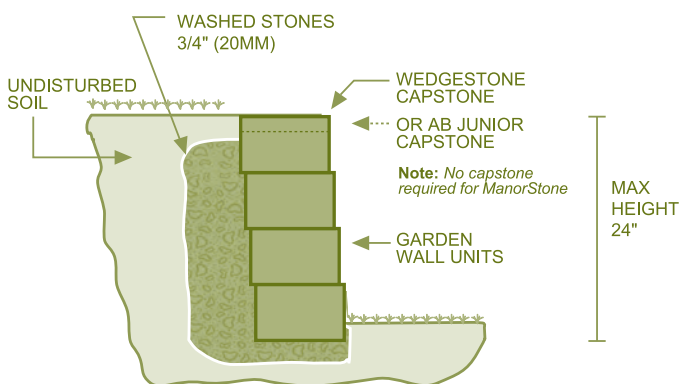

Prepare Base: Once you have drawn up plans and marked off the site of your garden wall project, dig a trench at least 200mm (8") deep by the desired width. Compact gravel in the trench and fill to a depth of 150mm (6") to withstand loading on the surface and seasonal frost from below.

The First Row: Lay the first level of blocks on the completed gravel base, making sure the units are level from side to side and front to back. Bury 1 inch of the base block for each foot of wall height.

Additional Rows: Stack additional rows by staggering the units along the wall to your desired height. **Note:** For AB Junior only, carefully back fill around and in the block cores and pack to lock into place.

CAPSTONES: Apply adhesive on the last course to adhere to CAPSTONES. Then fill your garden wall or planter with soil.

tools & materials required:

- ✓ Chisel
- ✓ 3 lb. Sledge
- ✓ Shovel
- ✓ Gloves
- ✓ Wheelbarrow
- ✓ Carpenter's Level
- ✓ Stakes & String
- ✓ Concrete Adhesive
- ✓ Tape Measure
- ✓ Safety Glasses
- ✓ Gravel
