

CONCRETE MASONRY UNITS

Concrete Masonry Unit

Concrete Masonry Units (CMU) are some of the most commonly used products. They provide the structural framework for a building and can also serve as a strong backup system for many types of veneer systems both indoor and outdoor. Concrete Masonry Units can also be used in many DIY projects.

We also use CarbonCure

Trees improve our plant's ecosystem by adsorbing carbon dioxide (CO₂) from the air. With CarbonCure, concrete masonry products can now adsorb and convert CO₂.
